

How to tidy up your tasks folder in RootsMagic 8 after you have imported a RootsMagic 7 database by using Microsoft Access. I am using the 2010 Version of MS Access.

If you do not already have the SQLite ODBC Driver you need to download a copy off the internet. You can search for one using Google or download one from here:

<http://www.ch-werner.de/sqliteodbc/>

Now follow these screen images substituting the path and name of your RM8 database accordingly

Get External Data - ODBC Database

?

×

Select the source and destination of the data

Specify how and where you want to store the data in the current database.

☐

Import the source data into a new table in the current database.
If the specified object does not exist, Access will create it. If the specified object already exists, Access will append a number to the name of the imported object. Changes made to source objects (including data in tables) will not be reflected in the current database.

☒

Link to the data source by creating a linked table.
Access will create a table that will maintain a link to the source data. Changes made to the data in Access will be reflected in the source and vice versa.
